

THE JEWISH OPPOSITION TO CANCER CURES

The Jew Fishbein [Editor of the Journal of the American Medical Association "JAMA" from 1924 to 1950] was the front Jew responsible, along with his Sanhedrin network in the background, to lie, swindle, and destroy any real cures for cancer, along with the Gentile geniuses behind them. All the time covering up the very existence of such cures from the Gentile public, while promoting a Jewish controlled medical system that empties the pockets of Gentiles, the Jew irradiates cancer victims, cuts them open and poisons them. Most die from these treatments. The Jew has made tens to hundreds of thousands of dollars off of cancer victims. Only one out of one thousand people survive such treatments.

Most cancer victims get sick in the first place due to the Jewish factory farming and pollution of the environment via their total control, not just of the banks but also of nearly all of the mass industries. Dr. Weston Price's global study back in the 1930's found that a populations' increase in cases of cancer and other ailments escalates when larger of amounts of processed food are consumed.

Over half a million Americans alone died from cancer in just 2006, in America alone. The total amount of global deaths from cancer in the latest EU report; the death rate is rising to 17 million a year worldwide.

It was discovered that the Third Reich had found an effective cure for cancer, as Hitler personally ordered massive amounts of state funding into disease research and cures, along with the best minds in the Reich to study the subject.

There would have been a universally known and practiced cure for cancer back in the 1930's, which would have saved hundreds of millions of lives, IF NOT FOR THE JEWS!

THE JEWS ARE OUR MISFORTUNE!

Morris Fishbein [Jew] - AMA Enemy
Of American Health by Bob Wallace LewRockwell.com
2-5-2

Dr. Morris Fishbein [1889-1976] originally studied to be a clown. Realizing he could make more money as a doctor, he entered medical school [where he failed anatomy], then barely graduated. He never treated a patient in his life. Why is he so important? Because he became head of the American Medical Association, a position that he used to enrich himself and crush legitimate therapies out of existence. He appeared to be motivated solely by money and power.

As head of the AMA [and editor of the Journal of the American Medical Association from 1924-1949], he decided which drugs could be sold to the public

based only how much advertising money he could extort from drug manufacturers, whom he required to place expensive ads in the JAMA. There were no drug-testing agencies, only Fishbein. It was irrelevant if the drugs worked.

Fishbein was a shakedown artist. Yet, today, there is a Morris Fishbein Center for the History of Science and Medicine at the University of Chicago.

The AMA, a State-backed guild that today has a near-stranglehold on the medical profession, was founded in 1847 merely as a social and scientific organization. Its original purpose was very appropriate. It was in their private [and the public's] interest for practitioners to get together to trade knowledge, and, for all the outward seriousness of the organization, to have some fun. The original purpose had gotten lost, though. Some members always want to use the State to reduce the supply of practitioners [which increases income] and eliminate competition [which also increases income, and, much more seriously, reduces innovation]. This happened with the AMA, which is why it is now a danger to the health of the American people.

In 1900, while attending the annual AMA convention in St. Paul, Minnesota, three doctors came up with the always-destructive but all-too-human idea of using the AMA as a front, in order to form a closed corporation for their financial benefit. A constitution, bylaws and a charter were created which appeared to give the members of the AMA a say in the activities of the corporation, whereas in reality the three directors had complete control. These three formed smaller political machines in every state, which they controlled through the main corporation.

In 1924, not surprisingly [perhaps inevitably] one of the directors became involved in a scandal and had to resign. He appointed Fishbein to take his place. Fishbein ultimately took control of the AMA, and by 1934 owned all of the stock. In his new position, he was able to assume dictatorial control of the state licensing boards and made it as difficult as he could for any doctor who did not join. He, and the three doctors who formed the corporation, were little more than extortionists, ones who made millions by using the power of the State.

The AMA, which started out as a legitimate organization, rapidly became crooked, and Fishbein was the main cause.

The worst of Fishbein's crimes was his destruction of Royal Rife, Royal Raymond Rife. I don't know if Royal Raymond Rife was legitimate or not. I believe the evidence leans towards his being a once-in-a-century genius. He was born in 1888 in Elkhorn, Nebraska, and died in 1971, at age 83. He grew up with a passion for microscopes, microbiology, and electronics. He was brilliant; there can be no doubt about that. He invented technology that is still in use today in optics, electronics, radiochemistry, biochemistry, ballistics, and aviation. Some of his many inventions included a heterodyning ultraviolet microscope, a micro-

dissector, and a micromanipulator. He studied at John Hopkins, received 14 major awards, and was honored with an honorary doctorate from the University of Heidelberg. He worked for Zeiss Optics, the US government, and several private employers, the most notable of them being Henry Timkin, who made millions manufacturing roller bearings.

Most people have never heard of Rife.

By 1920, Rife had built the world's first microscope that was strong enough for the him to see a virus [he sometimes had to painfully adjust his microscope for up to 24 hours to get the specimen into focus]. By 1932, after twelve years and five microscopes, he perfected his technology and constructed the largest and most powerful microscope, which he called his "Universal Microscope." It had almost 6,000 different parts and could magnify objects 61,000 times their normal size. With this two-foot-tall, 200-pound microscope, Rife became the first to see a live virus, and until recently, his microscope was the only one that could do this.

Modern electron microscopes, although more powerful than Rife's invention, instantly kill the viruses they are focused upon. Rife's microscope left the viruses alive, so they could be studied.

Rife's genius was first introduced to the public in the San Diego Union newspaper in 1929, and was followed by an article in Popular Science in 1931. Articles describing his great scientific breakthroughs appeared in the established scientific press in for the first time in late 1931 in Science magazine, as well as California and Western Medicine.

In 1944, the Smithsonian Institute in Washington, DC, published a detailed article about Rife in their national journal, with his microscope being the focus of it, but what was revealed to their readers was not only Rife's microscope, but how he was able to destroy disease-causing pathogens.

As far back as 1920, Rife had identified a virus that he believed caused cancer. He called it the "BX virus." He made over 20,000 unsuccessful attempts to transform normal cells into tumor cells. He failed until he irradiated the virus, caught it in a porcelain filter, and injected in into lab animals. Using this technique, he created 400 tumors in a row.

He began subjecting this virus to different radio frequencies to see if it was affected by them. He discovered what he called the "Mortal Oscillatory Rate" [MOR] of the virus. He successfully cured cancer in his 400 experimental animals before he decided to run tests on humans.

What Rife was doing was using resonance to kill the virus. Everything vibrates at different frequencies. If the resonance is correct, it can be used to shatter, just as a singer can use it to break a wineglass. By finding the proper resonance, Rife was able to shatter the virus. This is why he called it the Mortal Oscillatory Rate.

Rife claimed he also discovered the frequencies which destroyed herpes, polio, spinal meningitis, tetanus, influenza, and many other dangerous, disease-causing organisms. All told, there were over 50 infectious diseases that he apparently discovered cures for.

How did Rife do this? He painstakingly obtained the MORS by tuning the dial of the frequency generator while observing the sample pathogen under his microscope. When a frequency was discovered that destroyed a particular microorganism, its dial position was marked. The actual frequencies were determined later after his experiments. What he did, he apparently did intuitively and unwittingly, and it is doubtful he completely understood the theoretical method he utilized. For one thing, there was at that time no theory to explain what he was doing. [In doing research for this article, I have come to the conclusion that Rife was so far advanced over currently available theories that he could not explain what he was doing.]

In the summer of 1934, one of Rife's close friends, Dr. Milbank Johnson, along with the University of Southern California, appointed a Special Medical Research Committee to bring 16 terminally cancer patients from Pasadena County Hospital to Rife's San Diego Laboratory and clinic for treatment. The team included doctors and pathologists assigned to examine the patients, if they were still alive after 90 days.

Some of the other scientists and doctors Rife worked with were: E.C. Rosenow, Sr. [longtime Chief of Bacteriology, Mayo Clinic]; Arthur Kendall [Director, Northwestern Medical School]; Dr. George Dock; Alvin Foord [pathologist]; Rufus Klein-Schmidt [President of USC]; R.T. Hamer [Superintendent, Paradise Valley Sanitarium]; Whalen Morrison [Chief Surgeon, Santa Fe Railway]; George Fischer [Childrens Hospital, N.Y.]; Edward Kopps [Metabolic Clinic, La Jolla]; Karl Meyer [Hooper Foundation, S.F.]; and M. Zite [Chicago University].

At first, the patients were given three minutes of the appropriate frequency every day. The treatment consisted of the patients standing next to one of Rife's generators, which irradiated them. It was much the same as standing in front of a large fluorescent light. The researchers soon learned this was too much of the treatment. Suspecting the human body needed more time to dispose of the dead toxins, they reduced the time to three minutes every third day.

After the 90 days of treatment, the committee concluded that 14 of the patients had been completely cured. After the treatment was adjusted, the remaining two patients responded within the next four weeks. The total recovery rate using Rife's technology was 100%. The treatment was painless, and the side effects, minimal, if any. Except for building the generators, the total cost was a little electricity [today, the cost of treating a cancer patient averages \$300,000 per person. That's a lot of money, and the cancer industry is big business.]

Rife wrote in 1953, "Sixteen cases were treated at the clinic for many types of malignancy. After three months, 14 of these so-called hopeless cases were signed off as clinically cured by the staff of five medical doctors and Dr. Alvin G. Foord, M.D., pathologist for the group."

In 1937, Rife and some colleagues established a company called Beam Ray. They manufactured fourteen of Rife's "frequency instruments." Dr. James Couche, who was present at the clinic, used one of Rife's machines with great success for 22 years, long after the AMA had banned it.

Then, to Rife's, and the nation's great misfortune, Fishbein heard about Rife's frequency machine. Fishbein sent an attorney to make a token attempt to buy out Rife. Rife refused. Although no one knows the exact terms of the offer, it was probably similar to the one Fishbein made to Harry Hoxsey for his herbal cancer remedy [which Fishbein, in court, had to admit worked on skin cancer]:

Fishbein and his associates would receive all profits for nine years and Hoxey would receive nothing. Then, if they were satisfied that it worked, Hoxsey would begin to receive 10% of the profits. When Hoxsey refused, Fishbein used his political connections to have Hoxsey arrested 125 times in a period of 16 months. The charges [based on practicing without a license] were always thrown out of court, but Fishbein harassed Hoxsey for 25 years. The only good thing that came out of it is that the scandal forced Fishbein to resign.

Fishbein then offered Phil Hoyland, an investor in Beam Ray and an electrical engineer who had helped build the frequency instruments, legal assistance in an attempt to steal the company from Rife and the other investors. A lawsuit ensued.

The trial of 1939 put an end to the proper scientific investigation of Rife's frequency machine. Rife, who was not as resilient as Hoxsey, became unglued. Unable to cope with the savage and unfair attacks in court, he crumbled, turned to alcohol, and became an alcoholic, even though he won the case. Unfortunately, the legal bills bankrupted Beam Ray, and it closed down. Fishbein used his power within the AMA to halt any further investigation of Rife's work.

In 1950, Rife joined up with John Crane, who was an electrical engineer. They worked together for ten years, building more advanced frequency machines, but in 1960 the AMA closed them down. Crane was imprisoned for three years and one month, even though fourteen patients testified as to the effectiveness of the machine [the forewoman of the jury was an AMA doctor]. Rife died in 1971, from a combination of alcohol and Valium. He had spent the last one-third of his life as an alcoholic.

What happened to all of those who had supported Rife? By 1939, most of them were denying they ever knew him, even though 44 of them had honored Rife on

November 20, 1931 with a banquet billed as "The End to All Diseases" at Dr. Milbank's Pasadena estate.

Arthur Kendall, who worked with Rife on the cancer virus, accepted almost a quarter of a million dollars to suddenly "retire" in Mexico. This was a huge amount of money during the Depression. Dr. George Dock was silenced with an enormous grant, along with the highest honors the AMA could bestow. Everyone except Dr. Couche and Dr. Milbank Johnson gave up Rife's work and went back to prescribing drugs. Johnson died in 1944.

The medical journals, supported almost entirely by drug company advertising revenues and controlled by the AMA, refused to publish any paper by anyone on Rife's therapy. Generations of medical students graduated without hearing of Rife's breakthroughs in medicine. And what happened to Rife's decades of meticulous evidence of his work, including film and stop-motion photographs? Parts of his instruments, photographs, film, and written records were stolen from his lab. No one knows who was behind it. No one was ever caught.

Rife's documents for the cancer clinic were lost when he lent them to Dr. Arthur Yale a few years later. Barry Lynes, who reintroduced Rife's work to the public in 1986, in his book "The Cancer Cure that Worked," wrote, "Documents show the clinic existed and succeeded in curing Cancer. Doctors who continued treating seriously ill people with success given what the frequency instrument accomplished in 1934 tell the real story, as do signed reports from cured cancer patients in later years."

While Rife attempted to reproduce his missing data, his virus microscopes were vandalized, and pieces of his Universal Microscope were stolen. Earlier, arson had destroyed the multi-million dollar Burnett Lab in New Jersey, just as the scientists there were preparing to announce confirmation of Rife's work, but the last blow came later, when police illegally confiscated the remainder of Rife's 50 years of research.

Fortunately, his death was not the end of his electronic therapy. A few humanitarian doctors and engineers attempted to reconstruct his frequency machines to keep his work alive.

But do these modern machines work? I don't know. Modern researchers are trying to replicate the life's work of what may be one of the greatest geniuses in history.

If you'll look at the reviews of Lynes' book at Amazon.com, there are people who swear by Rife's machines. A doctor I know [who lives outside the US and wishes to remain anonymous] told me, "I have a feeling the Rife machines that are now available to us do not have the correct frequencies. The machines I've worked with have limited settings and transmit a general range of frequencies," but she

uses something similar, specifically the LISTEN and the much more advanced BEST machines, invented by James Clark.

She told me several of her case histories, one of which I will reproduce here: "[I was treating] a nine-week-old baby that was blue and dying. Doctors couldn't find anything wrong with her. I found Ross River Fever [mosquito transmitted] and the baby began to respond within two hours of giving her the frequencies, and went on to make a full recovery, just after one treatment. The parents did demand a blood test for the baby to confirm the Ross River virus - which it was! There wasn't anything the doctors could have done about it. I used to think that somehow the electromagnetic frequency gave the body the right information to deal with the virus. We now know how this works, due to Sharry Edwards, [another practitioner in the States I have studied with, who uses low-frequency sound for healing]. She has access to great lab equipment, and last year applied the frequencies representing various parasite, bacteria, and viruses to blood containing these pathogens. Under a special high-powered microscope, she observed that the frequency shattered the "mask" - the protein DNA that the pathogen would cloak itself with - and exposed the invader to the immune system, that would immediately attack and destroy."

This is essentially what Rife discovered over 80 years ago. We are 80 years behind where we should be, because of one despicable man, Morris Fishbein, who used the State to halt the advance of medicine, and to line his own pockets.

The LISTEN and BEST machines are legal in the US, but not totally, stated this doctor:

"Practitioners in the States do not use the 'imprinting' facility of the machines - that is, broadcasting the frequency. Since this broadcasting is not permitted by your laws, the devices are added to the machines when we buy them."

In other words, it is illegal in the US to use the machines to attempt to cure disease. The proper parts aren't even on the machine. It is illegal for a doctor to even suggest such a cure is possible. There are other instruments [and other inventors] who, past and present, have discovered the same thing Rife did. Gaston Naessons, Hulda Clark, and Antoine Priore have invented similar instruments. All suffered persecution at the hands of the State. Are they legitimate? All I can say is that they had an enormous amount of support from their patients.

What would have happened if Rife had succeeded, and Fishbein had failed? If what Rife was doing actually worked, there would be a lot of people who would have survived cancer. A large portion of the medical profession would have ceased to exist. It certainly didn't take a doctor to operate Rife's machines.

Scientists and researches could have devoted more time and money to things we are far behind on, like growing organs and limbs. The hundreds of billions of

dollars that have flowed to the nefarious alliance of the AMA, FDA, drug industry, and the State, would have never occurred.

The cure for these problems? Remove the State backing from the AMA and FDA, and unleash the power and creativity of the free market. Many people have been brainwashed into thinking the State protects them. The truth is the exact opposite.

Of my three children, one was given no drugs, no nitrates in his eyes or anything else. He has never worn glasses. The other two who were given the standard treatment in the hospital have had to wear glasses due to having nearsightedness. The Jews make a fortune off of glasses and optometry.

Excerpt from:
Hazards that Lurk in the Hospital Nursery

Although competitive pressures have brought improvements in some hospitals, the probability remains that your baby will be whisked off to the nursery moments after he is born. He will be subjected to a number of procedures, some of them legally mandated in most states, and then compelled to lie there – probably screaming his head off – for at least four hours. Only then, and only once every four hours after that, will you be allowed to breastfeed your baby or give him his bottle, if that is the option you select.

Your obstetrician will waste no time in giving your new baby his first exposure to the chemicals that dominate medical practice in the United States. He'll squirt a few drops of silver nitrate into the baby's eyes. This treatment is predicated on the ridiculous presumption that all mothers must be suspected of having gonorrhea, which may have been transmitted to the baby during delivery. Doctors have, in fact, fostered legislation requiring this treatment in every state.

Doctors reject the argument that the mother could be tested for gonorrhea instead of inflicting silver nitrate on her baby, claiming that this won't do because the test is not 100-percent accurate. **That defense is pure nonsense, because the silver nitrate isn't 100-percent effective, either.** Whether one is more effective than the other is moot, because if your baby were to develop gonorrheal ophthalmia for either reason, the problem can and will be solved by using antibiotics to treat the disease.

The use of silver nitrate made some sense before antibiotics became available, but the price your baby pays because its use is continued today, when it is no longer needed, is not insignificant. Silver nitrate causes chemical conjunctivitis in 30 to 50 percent of the babies who receive it. Their eyes fill up with thick pus, making it impossible for them to see during the first week or so of life. No one knows what the long-term psychological consequences of this temporary blindness may be. The treatment may also produce blocked tear ducts, which necessitates difficult surgical intervention to correct damage done by a senseless procedure. Finally, some doctors – including me – believe that the high incidence of myopia and astigmatism in the United States may be related to the placing of this caustic agent into the delicate, tender membranes of your baby's eyes.

It seems that every generation of doctors creates a new set of interventions that create problems that can only be resolved by further intervention. Most of the things a mother goes through when her baby is delivered in a hospital – the analgesia, the anesthesia, the induction of labor, all of the drugs – increase the chance that her infant will develop jaundice, because it is one of their side effects.

Many doctors routinely give vitamin K to newborn babies because they have been taught that infants are born with a deficiency of this vitamin, which influences how rapidly the baby's blood will clot. That's nonsense, unless the mother is severely malnourished, but most doctors do it anyway. **Administration of vitamin K to the newborn may produce jaundice, which prompts the pediatrician to treat it with bilirubin lights (phototherapy). These lights expose the baby to a dozen documented hazards that may require still further treatment and possibly affect him for the rest of his life.**

Originally published as Chapter 4, How to Raise a Healthy Child In Spite of Your Doctor. New York: Ballantine Books, 1990.

Industrial farming where food animals are jam-packed into crates, cages, and pens, living in their own excrement, covered with sores and having to endure intense suffering. This creates depression in a large number of people who eat meat, as the hormones and other bio-chemicals from the bodies of the animals are in the meat and the meat products. The Jew maximizes financial profits from prescription drugs. Patients who suffer from depression and related disorders are prescribed drugs, many of which are addictive. This is a multi-million dollar industry of which the Jew reaps millions upon millions of dollars. No amount of money is ever enough money for the Jew.

Vegetarians are not exempt either. The Jew run corporations work overtime to create plant hybrids, many of which are monstrosities, and insecticides that are

harmful not only to the environment, but to the health of the consumers, and other chemicals which are put into the soil, sprayed upon the plants and eventually wind up in our water supply that cause all kinds of diseases and cancer.

35% Food Grade Hydrogen Peroxide, when taken according to directions [extremely important] gives the body the extra oxygen it needs to cure itself, prevent asthma attacks and much more. The One-Minute Cure: The Secret to Healing Virtually All Diseases, by Madison Cavanaugh
<http://freedom-school.com/health/one-inutecurepasswordfreefinalpdf102708.pdf>
If you look around, this book is available on pdf for free on the internet.

There are toxins in all of the foods we eat. Many of these are intentionally added to make the population tired. Chronic fatigue is rampant. This ensures many do not have the energy to resist the Jew run system. Jew Karl Marx wrote to keep the workers [Gentile slaves] hungry and tired. This has become a reality.

Liquid Chlorophyll also adds extra oxygen to the body, giving natural energy and boosts the immune system. Prepared foods such as frozen TV dinners and twinkies and related are the worst, along with the dyes and other toxic filth in our foods. There is very little nutritional value and along with popular breakfast cereals, these are loaded with harmful chemicals, advertised on the TV for kids who don't know any better and sold to the unknowing public in massive quantities. The Jew not only makes an enormous profit from these toxic foods, but also reaps in billions treating victims with expensive drugs that only treat the symptoms.
